Claims 35-64 are drawn to compositions comprising a vitamin D compound and a hormone product (progestin product).

Applicants state on page 18, lines 7-12 that it "is contemplated that combinations of vitamin D compounds and progestins will exhibit not only additive but synergistic effects in the induction of apoptosis of non-neoplastic ovarian epithelial cells: In this manner the adverse physiological effects of administering larger quantities of Vitamin D compounds and of progestin products can be minimized. "Applicants are, therefore, required to elect a single synergistic combination of one vitamin D compound with one hormone product for examination on the merits.

The several inventions above are independent and distinct, each from the other, as they have acquired a separate status in the art of treating ovarian epithelial cells as a separate subject matter for inventive effect and require independent searches. It is noted that a reference to one synergistic combination of drugs would not be a reference to another synergistic combination of drugs under 35 U.S.C. 103. Further, the claims read on a multitude of synergistic combinations of drugs which would require many field of searches that would be an undue burden on the Examiner. Therefore, restriction for examination purposes is proper.
